

SEAM PRESSPOINT II

Design Description

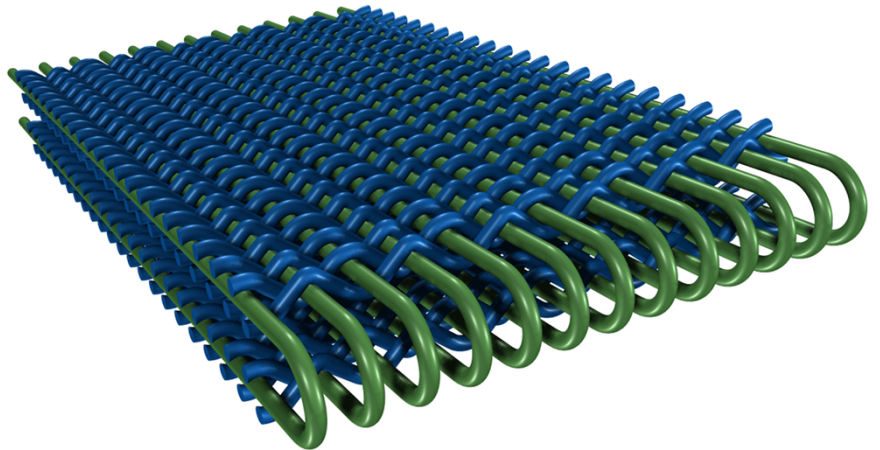

SEAM PRESSPOINT II is Albany's latest innovation in seamed press fabric technology featuring laminated construction for improved structural stability and uniformity.

Features

- Base fabric material options tailored to specific water handling requirements
- Laminated technology and single monofilaments employed for improved compaction resistance
- Increased contact points deliver higher pressure uniformity for optimum sheet dryness and quality
- High density loopformers for high seam strength and integrity
- Precise loop alignment and spacing for easy seamability

Benefits

- Enhanced water handling
- High void volume
- High compaction resistance
- Excellent dimensional stability
- Easy cleanability
- Long life potential
- Shorter installation time
- Safe fabric installations

Technical Specifications

Fabric Construction:

1+1 Laminated Double-layer

MD Yarns:

Single Monofilament

CD Yarns:

Single Monofilament
